Genopdagelsen af møllerne

Historien har det med at gentage sig: I 1800-tallet stod der vindmøller over alt i det ganske land suppleret med møller drevet af vand og af heste. I min barndom var møllerne for længst udrangeret og stod nu tilbage som smukke monumenter for en tid, der var engang.

Nu er alverdens lande ved at få øjnene op for, hvor skadelig vores forbrug af fossile brændstoffer har været for vores planet, så nu blomstrer alternative energikilder frem overalt. Nye slanke, effektive, vindmøller står i dag spredt ud over det danske landskab.

Kunsthøtografer og kunstmålere benytter ofte de antikke vand- og vindmøller som elementer i deres landskabsbilleder. Men de nye moderne vindmøller skal vi lede længe efter i den moderne kunst. Hvor længe skal der mon gå, før vi oplever disse nye elementer i vores landskaber som hørende til og måske også synes, at de kan være ganske smukke?

The rediscovery of the mills

History tends to repeat itself: In the 1800s, there were windmills all over the country, supplemented by mills powered by water and horses. In my childhood, the mills had long since been decommissioned and now stood as beautiful monuments for a time that once was.

Now countries all over the world are realizing how harmful our consumption of fossil fuels has been to our planet, so now alternative energy sources are flourishing everywhere. New sleek, efficient, wind turbines are today scattered across the Danish landscape.

Art photographers and painters often use antique water and windmills as elements in their landscape images. But we must look long for the new modern wind turbines in modern art. How long will it take before we experience these new elements in our landscapes as belonging and perhaps also think that they can look quite beautiful?
