Naturen i marts

Solskin, 11 grader. Vi er midt i marts måned i Himmerland.
Nu vågner naturen for alvor op efter vinterens koldere vejr.

Overalt i min have er forårsblomsterne for længst sprunget ud.
Krokus, vintergæk, erantis og julerose. Og det er vanskeligt at
få øje på, men de bittesmå hunblomster på troldhaslen har også
åbnet sig, klar til at tage mod hanraklernes fine støv.

Oppe på skrænten står mit bistade. Bierne har travlt. Jeg møder
dem overalt i haven, men de gør ikke mig noget. De har travlt
med deres arbejde.

Allerede den 7. marts så jeg citronsommerfuglen for første.
Næsten på dato samme dag som sidste år. Den smukke gule
flyver er virkelig min sande forårsbebuder.

Hindbærbuskene dækker hele den store skrænt. Her er både
blade og blomster ved at folde sig ud, og snart dækker de hele
området med deres friske grønne farve. De friske skud har lok-
ket rådyrets et-årige kid til. Det unge dyr mæsker sig i de friske
grønne skud.

Nature in March

Sunshine, 11 degrees Celsius. It is mid-March in Himmerland. Now nature is truly waking up after the colder winter weather.

All over my garden, the spring flowers have long since bloomed. Crocuses, snowdrops, winter aconite, and Christmas rose. And it is difficult to see, but the tiny female flowers on the corkscrew haze have also opened, ready to receive the fine pollen from the male catkins.

Up on the slope stands my beehive. The bees are busy. I encounter them everywhere in the garden, but they do not bother me. They are focused on their work.

As early as March 7, I saw the brimstone butterfly for the first time—almost on the exact same date as last year. That beautiful yellow flyer is truly my real herald of spring.

The raspberry bushes cover the entire large slope. Both leaves and flowers are beginning to unfold here, and soon they will cover the whole area with their fresh green colour. The new shoots have attracted a yearling roe deer. The young animal is feasting on the fresh green shoots.
